

The Reading Connection, LLC

As a reading specialist in the private sector, I work with children ages 5-18 that have all sorts of reading, memory, processing and attention difficulties. Many, if not all of my students, have deficits in the area of reading rate and accuracy (fluency). They often skip words or entire lines of text, easily lose their place, make substitutions of small words, and mispronounce words. This lack of fluency then leads to a comprehension problem, as the students are not making meaning from the text that they are reading. Even if the students are aware and able to self correct these errors, they lose the “flow” of the passage, resulting in choppy, faltering reading. The See-n-Read has been a great tool for my students because it allows them to focus on what they are reading.

Due to the unique SEE-N-READ™ Reading Tool design, students are able to zone in on what they are reading at that moment (this is in the clear window), while still being able to scan for what comes next and recall what they already read (this is in the grey area around the window). Unlike any other place marker or colored tool on the market, the SEE-N-READ™ Reading Tool meets the needs of children and adults at all ages and at all levels. See-n-Read is truly a universal reading assistance tool!
