To whom it may concern,

It is a pleasure to report on our evaluation of the See-N-Read® reading intervention tools. Visionary Sciences is made up of a group of clinicians who study, assess and remediate brain damage, dysfunction and disease. We do this by using eye tracking technology to evaluate, monitor and remediate those with pathology as well as helping to enhance those who must function optimally under stressful conditions and learning situations in general. We are involved in research and service with both illness and wellness.

See-N-Read® is an external noninvasive tool that provides a controlled context within which the brain can learn and function in an enhanced manner. It provides a structure that guides the brain as it works to accomplish reading and, as such, is one of the few assistive technologies that can enhance and control the process of reading so that a user can become more efficient at any level of functioning. It can aid in developing and maintaining the rate, accuracy, fluency and comprehension of reading.

With practice, using the See-N-Read® tool, one can maximize the efficiency of one's effort by controlling the rate/pace of vertical movement. By blocking glare, one can improve one's eye scanning and fixation process, critical to effective reading. It reduces incoordination, secondary to inefficient eye movement and focusing, as well as controlling fatigue and body strain secondary to postural inefficiency.

The See-N-Read® reading tool was developed by Sylvia R. Cadena Smith, Ed.D. This gifted researcher and practitioner has grasped the essence of brain/behavior relationships as they relate to the process of reading and has provided a learning tool that is as simple to use as it is effective. Since the brain is learning all the time, it is a method of teaching and enhancing the reading process across the life span, and, where there is pathology in the form of reading disorders, it can function to augment any remediation process. We heartily endorse See-N-Read® reading tools and use them in our research and service efforts.
